Nontraditional Risk Factors for Coronary Heart Disease 81 Incidence among Persons with Diabetes: The Atherosclerosis Risk in Communities (ARIC) Study

I. Saito, A.R. Folsom, F.L. Brancati, B.B. Duncan,
L.E. Chambless, and P.G. McGovern

In this study, predictors of coronary heart disease among patients with diabetes were levels of albumin, fibrinogen, and von Willebrand factor; factor VIII activity; and leukocyte count.

Reduction in Obesity and Related Comorbid Conditions 92 after Diet-Induced Weight Loss or Exercise-Induced Weight Loss in Men. A Randomized, Controlled Trial

R. Ross, D. Dagnone, P.J.H. Jones, H. Smith, A. Paddags,
R. Hudson, and I. Janssen

Weight loss induced by increased daily physical activity without caloric restriction substantially reduced obesity (particularly abdominal obesity) and insulin resistance in men. Exercise without weight loss reduced abdominal fat and prevented further weight gain.

Salary Equity among Male and Female Internists in 104 Pennsylvania

R.B. Ness, F. Ukoli, S. Hunt, S.C. Kiely, M.A. McNeil,
V. Richardson, N. Weissbach, and S.H. Belle

In this survey study, salaries significantly differed between male and female internists overall and in various medical practice settings.

Effects of Growth Hormone Administration on 111 Inflammatory and Other Cardiovascular Risk Markers in Men with Growth Hormone Deficiency. A Randomized, Controlled Clinical Trial

G. Sesnilo, B.M.K. Biller, J. Llevadot, D. Hayden, G. Hanson,
N. Rifai, and A. Klibanski

Long-term growth hormone replacement in men reduced levels of inflammatory cardiovascular risk markers, decreased central fat, and increased lipoprotein(a) and glucose levels without affecting lipid levels.

BRIEF COMMUNICATION

Body Size and Risk for Clinical Fractures in Older Women 123

K.L. Margolis, K.E. Ensrud, P.J. Schreiner, and H.K. Tabor, for
the Study of Osteoporotic Fractures Research Group

Total body weight was found to be useful in the prediction of hip, pelvis, and rib fractures when bone mineral density had not been measured.

ACADEMIA AND CLINIC

Cultural and Economic Factors That (Mis)Shape 128 Antibiotic Use: The Nonpharmacologic Basis of Therapeutics

J. Avorn and D.H. Solomon

An understanding of the determinants of antibiotic consumption is critical to explain current patterns of use and to devise programs for reducing inappropriate use.

REVIEW

Pharmacologic Treatment of the Irritable Bowel 136 Syndrome: A Systematic Review of Randomized, Controlled Trials

J. Jaiwala, T.F. Imperiale, and K. Kroenke

Among the drug therapies used for the irritable bowel syndrome, smooth-muscle relaxants are beneficial when abdominal pain is the predominant symptom. The efficacy of bulking agents has not been established. Loperamide is effective for diarrhea, and data on psychotropic agents are inconclusive. Evidence for 5-hydroxytryptamine-receptor antagonists seems favorable.

PERSPECTIVE

Caring and Cost: The Challenge for Physician 148 Advocacy

S.D. Pearson

The author explores the idea that caring about health care costs can be brought to the bedside in a way that will sustain trust among patients and the public.

EDITORIAL

Risk Factors for Coronary Heart Disease in Diabetes 154

V.A. Fonseca

The study by Saito and colleagues in this issue highlights the importance of several nontraditional risk factors in the pathogenesis of increased cardiovascular disease associated with diabetes.
